Does it feel like it has been a full quarter since March’s relative laggard here, generating returns of 1.99%.

S&P 500 – which tracks US large cap companies – was the EAFE index, produced 3.40% in returns. Domestically, the developed large cap companies, as measured by the MSCI market equities, returned a scorching 7.35%. International EM index, representing the performance of emerging markets, began to wane in the tail end of the month prior, the MSCI index disappointed. Perhaps attributable to a US dollar that continued to appreciate in April, June – like May before it – did not leave many markets unscathed. Previous blistering pace with which they performed in May is a thing of the past.

Although equity indices have somewhat moderated from the blistering pace with which they performed in April, June – like May before it – did not leave many disappointed. Perhaps attributable to a US dollar that continued to appreciate in April, June – like May before it – did not leave many markets unscathed. Previous blistering pace with which they performed in May is a thing of the past.

Yet again, despite another relatively risk-on month, fixed income products held their own. US Treasury Bonds, as exemplified by the BbgbBarc US Treasury index, returned 0.09% in the face of another 1bp rise in the 10-year yield to 0.66%. The long-term Treasury yield has been nothing if not consistent lately. US aggregate bonds, as tracked by the BbgBarc US Agg Bond index, surged by 1.96%; perhaps these were buoyed by the US Federal Reserve following through with their previously announced campaign to enhance corporate bond liquidity.

Oil investors are enjoying their time away from the spotlight after a chaotic onset of the crisis. The commodity rose 10.65% from the end of May to $39.27 per barrel. Nevertheless, reimposed lockdowns lurking on the horizon may give travel-eager investors a reason to tread lightly.

*5-Year performance number is annualized. Please see next page for additional information. Past performance is not a guarantee of future results. Indexes are not available for direct investment. Any investor who attempts to mimic an index will incur fees and expenses which would reduce returns.
A component of the U.S. Credit index. Publicly issued U.S. corporate and BBgBarc U.S. Corporate Investment Grade: of the Government/Corporate, the Mortgage-Backed Securities, and the Asset-Backed Securities indices. Moody’s Investors Service, Standard and Poor’s, or Fitch Investor’s Service, in that order. The Aggregate Index is comprised BBgBarc U.S. Aggregate Bond Index: Measures changes in global investment-grade, fixed-rate debt markets. It combines BBgBarc Global Agg. ex-U.S. Dollar: and financial institutions issuers), and Treasuries (includes public obligations of the U.S. Treasury with remaining Authorities, Sovereign, and Supranational), Corporate (dollar denominated debt from U.S. and non-U.S. industrial, utility, and fixed income prices. Generally, when interest rates rise, fixed income prices fall and when interest rates fall, fixed income prices generally rise. Commodities trading is generally considered speculative because of the significant potential for investment loss. Specific sector investing such as real estate can be subject to different and greater risks than more diversified investments. Declines in the value of real estate, economic conditions, property taxes, tax laws and interest rates all present potential risks to real estate investments.

**ASSET CLASS RETURNS:**

- **Source:** Russell, Bloomberg Barclays, Dow Jones, JP Morgan, Morningstar Direct
