

FREEDOM HYBRID

Aggressive Equity Hybrid Strategy

Closed to new accounts

Q4
2020

98% Equity / 2% Fixed Income

INVESTMENT OBJECTIVE: Designed to provide long-term capital appreciation with very strong growth potential, this portfolio seeks to maximize total returns by optimizing exposure of opportunities in the U.S. and abroad. Invested primarily in equities with little exposure to fixed-income type investments and alternatives, this diversified portfolio may be appropriate for those investors who can accept a moderate to high level of volatility over a full market cycle.

ALLOCATION BREAKDOWN (%)

Returns through 12/31/2020, \$25,000 minimum investment.

¹Since inception performance is shown if 10 years of performance is not available.

All investments are subject to risk, including loss. There is no assurance that any investment strategy will be successful. Past performance does not guarantee future results. Asset allocation and diversification does not ensure a profit or protect against a loss. Indices are not available for direct investment. Any investor who attempts to mimic the performance of an index would incur fees and expenses which would reduce returns. Capital Market Assumptions are forward looking data and subject to change at any time and there is no assurance that projections will be realized. Variations to capital market assumptions are expected and specific sectors or industries are more susceptible due to their increased vulnerability to any single economic, political or regulatory development. The charts and tables presented herein are for illustrative purposes only and should not be considered as the sole basis for your investment decision. It is important to review the investment objectives, risk tolerance, tax objectives and liquidity needs before choosing an investment style or manager. Composite returns are showing on a gross and net basis. Please see important disclosures related to composite performance, risks, and index descriptions beginning on page 2.

OUR FOUR-STEP PROCESS

The AMS Research team adheres to a disciplined, four-step investment process that is designed to ensure that every investor receives a portfolio carefully tailored to meet their individual objectives.

1 Capital Market Assumptions

Develop forward looking risk, return and correlation assumptions for different asset classes

2 Asset Allocation

Optimize the asset allocation and build efficient portfolios from the selected asset classes

3 Investment Selection

Construct portfolios by selecting high quality investment solutions that have consistently compensated investors for the risk taken in their portfolios

4 Ongoing Consulting Process

Continuously monitor every element of the process to ensure that we are providing a sophisticated program that works towards reaching each client's goals

An ETF is a type of Investment Company whose investment objective is to achieve a return similar to that of a particular market index. An ETF will invest in either all of the securities or a representative sample of the securities included in the index they track. ETFs may be bought or sold throughout the day in the secondary market, but are generally not redeemable by retail investors for the underlying basket of securities they track. Clients likely to find a Freedom ETF strategy most appropriate are those willing to accept market-like returns, lower management fees and operating expenses, with little potential for the individual ETFs to outperform the indices they track. Mutual funds are typically actively managed, and as a result, the underlying management fees and operating expenses assessed by the fund companies are generally higher than those for ETFs (1% to 1.5% for mutual funds versus .20% to .30% for ETFs). Potential investors should understand that the annual advisory fee charged in the Freedom ETF program is in addition to the management fees, operating expenses, and other expenses associated with an investment in ETFs.

ETFs and Mutual Funds referenced as part of the Freedom portfolios are current as of the date of this report but are subject to change at any time. Funds referenced may not have been included in the portfolio for the entire time period shown.

Freedom strategies may utilize mutual funds which deduct operating expenses from their respective fund assets (expense ratio). The expense ratio is shown net and gross of 12b-1 fees which are reimbursed to clients on a semi-monthly basis. The portfolio expense ratio may be updated based on allocation changes and trading activity. Investment companies typically determine the expense ratio annually and therefore this number can change based on an update of operating expenses. These charges are in addition to Freedom advisory fees. Some fund classes may also apply an initial and/or deferred sales load, which would normally be deducted from the initial investment and/or the proceeds at liquidation but these sales loads are waived by the fund companies within the Freedom program. In an effort to limit market timing activity, fund companies generally impose redemption fees, or short term trading penalties (typically 1% to 2% of the original amount invested), to their funds, which are generally NOT waived for fee-based accounts. These penalties are typically assessed to clients liquidating a fund within 60-90 days of purchase (but may be six months to a year). Please note that each fund family sets its own short term window, which can vary widely from fund to fund.

Mutual funds often offer their portfolios in multiple share classes. These classes, while invested in the same underlying portfolio, offer a variety of cost structures for different types of investors. The differences between classes may include sales loads, 12(b)-1 distribution fees, and administrative and operating expenses. Asset Management Services seeks to invest in classes of funds with lower operating expenses, such as no-load and institutional classes or classes intended specifically for fee-based accounts. However, many of these share classes have only recently become available and, as a result, long-term performance specific to these newer classes may not be available. In such cases, the returns, shown reflect the performance of the share class used in the Freedom strategies blended with the returns of the original share class for periods prior to the inception of the newer class. Such performance substitutions, typically performed by the mutual funds themselves, are based on the fact that the different share classes have a common underlying portfolio and may therefore have been expected to perform similarly, allowing for the different cost structures.

Adjustments are made, as a downward revision to performance, in the event that the new class has a higher expense ratio than the alternative share class. If the share class acquired in the Freedom account has a lower expense ratio, no performance adjustment is made.

Freedom portfolios may include portfolio managers or mutual funds which are affiliates of Raymond James & Associates, Inc. ("RJA"). The participation of affiliated portfolio managers or mutual funds may create an incentive for RJA to recommend the affiliated portfolio manager or mutual fund over a similarly qualified and suitable non-affiliated portfolio manager or mutual fund.

Important information related to Freedom composite performance returns:

Where shown, performance figures are for informational purposes only and should not be used as the sole basis of your investment decision. Past performance is not indicative of future results, and the choice of a portfolio should not be based upon performance shown.

When accounts open in Freedom, performance is based on a size-weighted (asset-weighted) composite of all fully discretionary, wrap-fee accounts. Freedom results are calculated using the Discounted Cash Flow Method, are time-weighted, and include cash in the total returns. Cancelled accounts remain in the composite through their last full month.

Composite performance generally begins when the strategy has three or more accounts open and invested for at least one full month. Reported composite performance was not duplicated for every individual account in the composite, resulting in a different return for any particular investor. Investing involves risk and you may incur a profit or a loss. Past performance is no guarantee of future results. Performance data have not been audited by an independent third party and are subject to revision. Thus, the composite returns shown above may be revised and Raymond James will publish any revised performance data. Please refer to Raymond James & Associates' Wrap Fee Program Brochure for the Freedom fee schedules. Raymond James & Associates, Inc., Raymond James Financial Services, Inc., Raymond James Bank and Eagle Asset Management, Inc. are wholly-owned, independent subsidiaries of Raymond James Financial. Eagle funds are not available in Freedom retirement strategies. The Freedom program was first offered in April of 2002. Raymond James reserves the right to replace an existing fund or manager in a strategy at any time.

Gross returns are shown at net-asset value ("NAV") of the funds, but do not reflect the effect of Freedom advisory fees. Net results are after all fees including the individual funds' internal management and operating expenses, and Freedom advisory fees, but before domestic taxes. Beginning March 2012, Raymond James began reimbursing 12b-1 mutual fund fees on a semimonthly basis. Since these reimbursements are fees being returned to the client, the fee amount is not included in the "Gross" return, while it does factor into the "Net" return. The portfolio expense ratio may be updated based on allocation changes and trading activity. Investment companies typically determine the expense ratio annually and therefore this number can change based on an update of operating expenses. Performance includes reinvestment of all dividends, interest, and capital gains. Dividends are not guaranteed and a company's future ability to pay dividends may be limited. The maximum client fee is 3.00% annually for all Freedom Strategies; however, performance is shown net of actual fees experienced within the respective composites, which is expected to be lower than the maximum fee.

Important information related to portfolio Risks:

It is important to review the investment objectives, risk tolerance, tax objectives and liquidity needs before choosing an investment style or manager. All investments carry a certain degree of risk and no one particular investment style or manager is suitable for all types of investors. Asset allocation and diversification does not ensure a profit or protect against a loss. This should not be considered forward looking, and are not guarantees of future performance of any investment. There is no assurance that any investment strategy will be successful.

- Fixed-income securities (or "bonds") are exposed to various risks including but not limited to credit (risk of default or principal and interest payments), market and liquidity, interest rate, reinvestment, legislative (changes to the tax code), and call risks.

- There is an inverse relationship between interest rate movements and fixed income prices. Generally, when interest rates rise, fixed income prices fall and when interest rates fall, fixed income prices generally rise. Bond and bond fund investors should carefully consider risks such as: interest rate risk, credit risk, liquidity risk and inflation risk.

- International investing involves special risks, including currency fluctuations, different financial accounting standards, and possible political and economic volatility.

- Investing in emerging markets can be riskier than investing in well-established foreign markets. Emerging and developing markets may be less liquid and more volatile because they tend to reflect economic structures that are generally less diverse and mature and political systems that may be less stable than those in more developed countries.

Investing in small-cap stocks generally involves greater risks, and therefore, may not be appropriate for every investor. Stocks of smaller or newer or mid-sized companies may be more likely to realize more substantial growth as well as suffer more significant losses than larger or more established issuers.

- Commodities trading is generally considered speculative because of the significant potential for investment loss. Among the factors that could affect the value of the fund's investments in commodities are cyclical economic conditions, sudden political events, changes in sectors affecting a particular industry or commodity, and adverse international monetary policies. Markets for precious metals and other commodities are likely to be volatile and there may be sharp price fluctuations even during periods when prices overall are rising.

- Specific sector investing such as real estate can be subject to different and greater risks than more diversified investments. Declines in the value of real estate, economic conditions, property taxes, tax laws and interest rates all present potential risks to real estate investments.

- Some accounts may invest in Master Limited Partnership ("MLP") units, which may result in unique tax treatment. MLPs may not be appropriate for ERISA or IRA accounts, and cause K-1 tax treatment. Please consult your tax adviser for additional information regarding the tax implications associated with MLP investments.

- Changes in the value of a hedging instrument may not match those of the investment being hedged. These portfolios may be subject to international, small-cap and sector-focus exposures as well. Accounts may have over weighted sector and issuer positions, and may result in greater volatility and risk.

Definitions and Benchmark Information:

Standard Deviation is a measure of volatility, commonly viewed as risk. Regarding quarterly returns, it is the square root of the variance, which equals the expected value of the squared deviation from the mean value. A more volatile investment will have a higher standard deviation while the deviation of a more stable investment will be lower.

Broad benchmarks are presented to illustrate the general price movement in one or more broad, widely accessible asset class. These benchmarks are not intended to represent the security selection process or holdings, but serve as a frame of comparison using established, well known indices. These indices are not available for direct investment. A person who purchases an investment product which attempts to mimic the performance of an index will incur expenses such as management fees, transaction costs, etc. which would reduce returns.

Standard & Poor's 500 (S&P 500) Index: Measures changes in stock market conditions based on the average performance of 500 widely held common stocks. Represents approximately 68% of the investable U.S. equity market.

MSCI EAFE (Europe, Australasia, Far East) Index: A free float-adjusted market capitalization index that is designed to measure developed market equity performance, excluding the United States & Canada. The EAFE consists of the country indices of 21 developed nations.

Bloomberg Barclays U.S. Aggregate Bond Index: Measures changes in the fixed rate debt issues rated investment grade or higher by Moody's Investors Service, Standard and Poor's, or Fitch Investor's Service, in that order. The Aggregate Index is comprised of the Government/Corporate, the Mortgage-Backed Securities, and the Asset-Backed Securities indices.
